120° field of view

The field of view means the observable area one can see through the camera lens. It translates directly to how much of your meeting space will be visible to the participants joining remotely. A 120-degree FoV is the right solution for most standard meeting spaces.

2D & 3D Digital Noise Reduction

Auto-framing

With intelligent face detection and voice localization, the camera tracks whoever is speaking and smoothly switches between presenters automatically adjusting to best fit participant location and quantity. It not only recognizes and zooms in on meeting participants, but also tracks speakers as they move about the room.

Clear, Crisp and Natural Audio

Featuring an advanced noise reduction algorithm, the integrated 8-element mic array detects audio from up to 8 metres away, delivering high quality audio free from any annoying background noise or distortion.
